

Technical Data Sheet

VARYBOND PENETRATING OIL

Art.-No. VB 71

Colour:	grey liquid
Specific gravity (20° C): [g/cm ³]	0,70
Odour:	characteristic
Boiling range of the solvents: [° C]	180 - 210
Viscosity at 40° C, DIN 51562-1: [cSt]	5
Surface tension: [mN/m]	26

Varybond Penetrating Oil is an extremely efficient penetrating oil to free and lubricate seized and rusted mechanism, screws, nuts and bolts.

Application

Due to its extremely low surface tension it penetrates into hard-to-reach parts and areas and creeps into the smallest openings and dissolves dried grease. It leaves a lubricating film that reduces wear. Therefore it reduces the breakage rate of frozen parts and lowers the maintenance costs. It contains no aggressive solvents and is harmless to metals, rubbers and the most plastics.

Directions

Spray on parts to be treated. Apply liberally and allow a few minutes for complete penetration. Re-apply where required. Rust-locked mechanisms may need to be left overnight before movement will occur. Through high capillary attraction the product also acts at places of difficult access. To guarantee full lubricating and corrosion protection repeat the procedure from time to time.
